Series	The Norwegian Election Research Programme was launched in the middle of the 1950's, under the direction of The Institute for Social Research. Henry Valen and Stein Rokkan were responsible for the programme. The programme co-operated with Norsk Gallup Institute A/S for sample survey data collection in the election studies covering the Storting elections in 1957, 1965, 1969 and 1973. In 1977 the programme started to co-operate with Statistics Norway (SSB) for the data collection for these studies. The election studies are intended to give statistical data for research covering elections and political processes in Norway.

Abstract

The Norwegian Election Study in 1977 is included in the Election Reserach Program at Institute of Social Research - ISF - (1957-1977). The objective of the study is partly to extend the analyses of earlier elections, partly to study the actual tendencies in Norwegian politics and characteristics of the election to the National Assembly - Stortinget - in 1977.

Bernt Aardal and Henry Valen have been responsible at IFS for the study. Statistics Norway completed in 1977 a data collection for the Norwegian Election study 1977: ISF has prepared the questionnaires, while SSB has drawn the sample, completed the collection of data and organised the data files.
